

Bachman's™

Growing Since 1885

Weeping Mulberry

Morus alba 'Pendula'

Height: 10 feet

Spread: 15 feet

Sunlight: ○ ● ●

Hardiness Zone: 5

Description:

An unusual accent tree with a twisted weeping habit of growth, rather quaint when young but becomes wide-spreading and prominent when mature, best used as a solitary feature; very adaptable to many conditions, fruits can be messy and prolific

Ornamental Features

Weeping Mulberry has green foliage throughout the season. The pointy leaves turn yellow in fall. The flowers are not ornamentally significant. The red fruits are held in clusters in mid summer. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up.

Landscape Attributes

Weeping Mulberry is a multi-stemmed deciduous shrub with a rounded form and gracefully weeping branches. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This shrub will require occasional maintenance and upkeep, and usually looks its best without pruning, although it will tolerate pruning. It is a good choice for attracting birds to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy

Weeping Mulberry is recommended for the following landscape applications;

- Accent

Planting & Growing

Weeping Mulberry will grow to be about 10 feet tall at maturity, with a spread of 15 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for 40 years or more.

Bachman's™

Growing Since 1885

This shrub performs well in both full sun and full shade. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species.
