Height: 40 feet

Spread: 45 feet

Sunlight:

Hardiness Zone: 4

Description:

One of the finest, most aristocratic trees available, this is a good choice for a shapely street or shade tree; lustrous dense dark green foliage turns a rich yellow in fall, maintains a tight form with minimal pruning

Ornamental Features:

Emerald Lustre Norway Maple has attractive dark green foliage which emerges brick red in spring. The lobed leaves are ornamentally significant and turn yellow in fall. It is blanketed in stunning corymbs of lemon yellow flowers along the branches in early spring before the leaves. The fruit is not ornamentally significant. The furrowed black bark is not particularly outstanding.

Landscape Attributes:

Emerald Lustre Norway Maple is a dense deciduous tree with a shapely oval form. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance tree, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. It has no significant negative characteristics.

Emerald Lustre Norway Maple is recommended for the following landscape applications;

- Shade

Plant Characteristics:

Emerald Lustre Norway Maple will grow to be about 40 feet tall at maturity, with a spread of 45 feet. It has a high canopy with a typical clearance of 6 feet from the ground, and should not be planted underneath power lines. It grows at a medium rate, and under ideal conditions can be expected to live to a ripe old age of 100 years or more; think of this as a heritage tree for future generations!

This tree should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments.

This is a selected variety of a species not originally from North America.
