

Dwarf European Viburnum

Viburnum opulus 'Nanum'

Height: 24 inches

Spread: 30 inches

Sunlight: ○ ●

Hardiness Zone: 4

Other Names: Dwarf European Highbush Cranberry

Description:

A dense, rigidly upright growing small shrub with good fall color, does not have the flowers or fruit of the species; hardy and adaptable, makes an excellent low hedge or garden background shrub, excellent in groupings

Ornamental Features

Dwarf European Viburnum has dark green foliage throughout the season. The serrated lobed leaves turn an outstanding red in the fall. Neither the flowers nor the fruit are ornamentally significant. The gold stems can be quite attractive.

Landscape Attributes

Dwarf European Viburnum is a dense multi-stemmed deciduous shrub with a more or less rounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This shrub will require occasional maintenance and upkeep, and can be pruned at anytime. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Dwarf European Viburnum is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Dwarf European Viburnum will grow to be about 24 inches tall at maturity, with a spread of 30 inches. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
