Growing Since 1885

Dark Green Spreader Yew - New For 2021!

Taxus x media 'Dark Green Spreader'

Height: 4 feet

Spread: 6 feet

Sunlight:

Hardiness Zone: 4

Description:

A popular evergreen shrub for the garden with rich dark green needles, new growth is a contrasting bright green in spring and early summer; wide spreading and slow growing, takes pruning very well, performs well in shade, resistant to winter burn

Ornamental Features

Dark Green Spreader Yew has dark green foliage which emerges light green in spring. The ferny leaves remain dark green throughout the winter. Neither the flowers nor the fruit are ornamentally significant.

Landscape Attributes

Dark Green Spreader Yew is a dense multi-stemmed evergreen shrub with a ground-hugging habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a high maintenance shrub that will require regular care and upkeep, and can be pruned at anytime. It has no significant negative characteristics.

Dark Green Spreader Yew is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use
- Topiary

Planting & Growing

Dark Green Spreader Yew will grow to be about 4 feet tall at maturity, with a spread of 6 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

Bachman's™

Growing Since 1885

This shrub performs well in both full sun and full shade. It does best in average conditions that are neither too wet nor too dry, and is very intolerant of standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets.
