Growing Since 1885

Rushmore Arborvitae

Thuja occidentalis 'Rushmore'

Height: 18 feet

Spread: 5 feet

Sunlight: ○

Hardiness Zone: 3

Other Names: American Arborvitae, Eastern White Cedar

Description:

A sturdy and hardy upright evergreen shrub that is very tight and compact; has excellent resistance to winterburn; foliage is consistently green all year long; makes an excellent hedge plant, will tolerate some pruning

Ornamental Features

Rushmore Arborvitae has dark green foliage. The scale-like leaves remain dark green throughout the winter. Neither the flowers nor the fruit are ornamentally significant.

Landscape Attributes

Rushmore Arborvitae is a dense multi-stemmed evergreen shrub with a distinctive and refined pyramidal form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a high maintenance shrub that will require regular care and upkeep. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Rushmore Arborvitae is recommended for the following landscape applications;

- Vertical Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Rushmore Arborvitae will grow to be about 18 feet tall at maturity, with a spread of 5 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

Bachman's™

Growing Since 1885

This shrub should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selection of a native North American species.
